class struggle. In fact, this was probably the most important single source of opposition to a standing army in the early days, bearing in mind the popular Shay's and Whiskey rebellions. That both the poor farmers and the urban-planter coalition were conscious of the class character of the army is more than amply documented.

Ekirch also demonstrates that from their earliest manifestations, in 1828, the political and economic labor movements were vigorous and articulate opponents of militarist proposals for the draft or other service, and opposed defense budgets, state or federal. Not until 1916 did they surrender their hitherto implacable opposition, when Gompers came out for Wilson's "preparedness."

Today, in the author's view, the decline in individual liberty due to the mounting role of the army in society (to mention only one area), is proceeding at a vastly accelerated tempo. The new role of the United States as aspirant to total world power, the permanent war economy, the consequent increase in persecution of radicals and anti-militarists, are all of a piece to him.

Ekirch's scrupulous scholarship, his determined effort to view American history within the framework of a meaningful, naturalistic pattern, command attention in a period such as ours, so rich, above all else, in pure apologetics.
